## The key hazards in Ngati Taka rohe

- Major Storms
- Flooding
- Prolonged Power outage
- Tsunami
- Road Transport Crashes
- Rural Fire
- Influenza Pandemic
- Drought

### Major Storms

Major storms affect wide areas and can be accompanied by strong winds, heavy rain, thunder, lightning, tornadoes and rough seas. They can cause damage to property and infrastructure, affect crops and livestock, disrupt essential services, and cause coastal inundation.

Severe weather watches and warnings are issued by the MetService and available through the broadcast media, by email alerts, and online at [www.metservice.co.nz](http://www.metservice.co.nz)

### Flooding

Floods can cause injury and loss of life, damage to property and infrastructure, loss of stock, and contamination of water and land.

Floods are usually caused by continuous heavy rain or thunderstorms but can also result from tsunami and coastal storm inundation. A flood becomes dangerous if:

- the water is very deep or travelling very fast
- the floods have risen very quickly
- the floodwater contains debris, such as trees and sheets of corrugated iron.

Getting ready before a flood strikes will help reduce damage to your home and business and help you survive.

# get ready...

## Prolonged Power Outage

Be aware that landlines and cellphones may fail after about ten hours (the expected service life of backup batteries in the phone exchanges and the cellphone towers).

Cordless phones will fail as soon as the power goes off. Always have a corded phone handy to connect to the landline wall socket if there is a power failure.

Telephone answering machines may not work when the power is off.

Use phones for urgent matters only - it drains the batteries in the phone exchanges and they may fail earlier. Use perishable food from the fridge first. Then use food from the freezer. Finally begin to use non-perishable foods.

If you need power for medical needs or equipment, you should contact your provider before an outage occurs, so you have a plan and know what to do.

## Tsunami

New Zealand's entire coast is at risk of tsunami. A tsunami can violently flood coastlines, causing devastating property damage, injuries and loss of life.

A tsunami is a natural phenomenon consisting of a series of waves generated when a large volume of water in the sea, or in a lake, is rapidly displaced. A tsunami can be caused by large submarine or coastal earthquakes; underwater landslides which may be triggered by an earthquake or volcanic activity; large coastal cliff or lakeside landslides; or volcanic eruptions beneath or near the sea.

## How a Tsunami Works

Most tsunamis are caused by large earthquakes below or near the ocean floor.

- 1 A plate shifts abruptly, causing an earthquake, and displacing water.
- 2 Waves are generated and move out in all directions across the ocean, some traveling as fast as 600 mph.

- 3 As waves enter shallow water, they compress, their speed slows, and they build in height.
- 4 The wave height increases, and associated currents intensify, becoming a threat to life and property.

[weather.gov/tsunamisafety](http://weather.gov/tsunamisafety)

## Know the natural warning signs

If you are at the coast and experience any of the following, move immediately to the nearest high ground, or as far inland as you can:

- Feel a strong earthquake that makes it hard to stand up, or a weak rolling earthquake
- that lasts a minute or more;
- see a sudden rise or fall in sea level; or
- hear loud and unusual noises from the sea.

## Be Safe!

Know your tsunami evacuation zones

See the map on page 20

# get ready...

## Road Transport Crashes

Northland's difficult terrain, widely spread rural population, coastal settlements, proximity to Auckland, our popularity as a tourist destination and the fact that most freight is transported via road all contribute to the challenges surrounding the management of transportation in our region.

Managing road safety in Northland is a joint effort between the New Zealand Police, Northland Regional Council and the region's three district councils.

## Rural fire

Although there are many benefits to living in the country, rural property owners face a higher risk of fire than city dwellers.

If a fire starts it may not be detected quickly, and emergency services take longer to respond because of greater travel distances and difficult terrain.

For more information on fire danger, fire season status and requirements for permits, visit [www.checkitsalright.nz](http://www.checkitsalright.nz)

# get ready...

## Influenza Pandemic

An influenza virus capable of causing a pandemic is one that people have no immunity to, that can easily spread from person to person, and that is capable of causing severe disease. We all need to be prepared for a pandemic in order to help prevent spread and look after ourselves as best we can.

Here are a few simple things you can do now to prepare for a pandemic:

- Cover your coughs and sneezes
- Wash and dry hands often
- Keep away from others and stay home if you become unwell

- Regularly disinfect common surfaces like phones, handles, taps, toys, etc.
- Put together an emergency plan and kit
- Keep paracetamol and ibuprofen handy for reducing fever and aches and pains
- think about things to do if your family have to stay home for a week or so i.e. books, games, movies

## Drought

Prolonged droughts (three months or more) and/or wide-spread droughts (affecting three or more regions) can have a significant impact on Northland, with major losses of agricultural production and extended periods of water-use restrictions enforced.

Good preparation, early warning and close monitoring of drought are three key factors for minimising the impact of drought. Civil Defence is not responsible for drought response; this is coordinated by the Ministry for Primary Industries and in Northland, the Rural Support Trust.

For information on drought visit: [www.mpi.govt.nz](http://www.mpi.govt.nz) OR [www.niwa.co.nz/climate/information-and-resources/drought-monitor](http://www.niwa.co.nz/climate/information-and-resources/drought-monitor)

## CREATE

# Emergency Survival Kit

In most emergencies you should be able to stay in your home. Plan to be able to look after yourself and your household for at least three days or more. Assemble and maintain your emergency survival items for your home as well as a portable getaway kit in case you have to leave in a hurry. You should also have essential emergency items in your workplace and in your car.

## Emergency Survival Items

- |  |  |
|--|--|
| <input type="checkbox"/> Torch with spare batteries or a self-charging torch             | <input type="checkbox"/> Toilet paper and large rubbish bags for your emergency toilet |
| <input type="checkbox"/> Radio with spare batteries                                      | <input type="checkbox"/> Face and dust masks   |
| <input type="checkbox"/> Wind and waterproof clothing, sun hats and strong outdoor shoes |  |
| <input type="checkbox"/> First aid kit and essential medicines                           |  |
| <input type="checkbox"/> Blankets or sleeping bags                                       |  |
| <input type="checkbox"/> Pet supplies  |  |

## Getaway Kit

Everyone should have a packed getaway kit in an easily accessible place at home and at work which includes:

- Torch and radio with spare batteries
- Any special needs such as hearing aids and spare batteries, glasses or mobility aids
- Emergency water and easy-to-carry food rations such as energy bars and dried foods
- First aid kit and essential medicines
- Essential items for infants or young children such as formula and food, nappies and a favourite toy
- Change of clothes (wind/waterproof clothing and strong outdoor shoes)
- Toiletries – towel, soap, toothbrush, sanitary items, toilet paper
- Blankets or sleeping bags
- Face and dust masks
- Pet supplies
- Power bank and phone charger

### Alerts to your smartphone

Two alerting platforms are used by Northland Civil Defence (and other official agencies) to send alerts about severe weather, tsunami or other emergencies.

The Red Cross Hazard App

Emergency Mobile Alerts (EMAs)

Both options are free to users although smartphones need to be of certain capability to be able to receive them.

We recommend that if possible, people take advantage of both.

To find out more, visit:  
[www.nrc.govt.nz/cdalert](http://www.nrc.govt.nz/cdalert)

## AHI / FIRE

If a fire starts in a rural environment, it may not be detected as quickly, and emergency services are likely to take longer to respond because of greater travel distances.

Most Te Tai Tokerau vegetation fires start from escaped rubbish fires.

For information on fire danger, fire season status and requirements for fire permits visit [www.checkitsalright.nz](http://www.checkitsalright.nz)

### BEFORE A FIRE

**To protect your rural property from fire, we recommend:**

- Installing smoke alarms and testing them regularly.
- Designing an escape plan and practicing it [www.escapeplanner.co.nz](http://www.escapeplanner.co.nz)
- Having two exit points from every room in your home, and a safe designated meeting place outside.
- Keeping the grass green and mown or grazed around your home.
- Creating a safety zone around your home of at least 10m by clearing any dead or dry material and replacing flammable plants and trees with low flammable species.
- Making sure your property is clearly signposted with your RAPID rural property identification number.

- Installing multipurpose dry powder extinguishers in your house and out buildings.
- Keeping a garden hose connected and make sure it is long enough to reach around the house.
- Ensuring your driveway has a minimum clearance of 4m wide and 4m high and adequate turning space for large vehicles.
- Easy access to water supplies and making sure they are sign-posted.
- Storing firewood and other flammable material away from your house.
- Safe handling and storage of gas or liquid fuels.
- Maintaining machinery and equipment in working order.
- Disposing of ash safely in a metal container and using approved incinerators.

### DURING A FIRE

- Crawl low and fast to escape smoke. 'Get Down, Get Low, Get Out.'
- Shut doors behind you to slow the spread of fire.
- Meet at the planned meeting place.
- Once out, stay out - never go back inside.
- phone Fire and Emergency on 111 from a safe phone.

### Tell Fire and Emergency:

- House number
- Street name
- Nearest intersection
- Suburb and city
- Rural ID number if you have one

# get thru...

## AFTER A FIRE

Nothing can really prepare you for the impact of a fire or other emergency on your family and property. Even a small fire or flood can make you feel helpless and unsure of what to do next. This is entirely understandable. Fire and Emergency NZ regularly sees home owners faced with the same distressing situation. Here's some guidance on the important things you need to do now that the unimaginable has happened.

Do not enter your damaged house unless you have to and have been advised it is safe to do so. Fire and Emergency NZ will check the water, electricity and gas supplies and either arrange to have them disconnected or advise you what action to take.

If you can't enter your home, you'll need to arrange accommodation. You may need to stay with family, friends or in a motel for at least one night, and longer if the house has been seriously damaged.

### When your house is safe and you are allowed back:

- Try to find your identification, insurance information, medication information, eye glasses, hearing aid, wallet and valuables.
- If the house is too badly damaged to live in, board up openings to discourage trespassers.
- You may need to arrange security patrols to protect it from burglary.
- Keep receipts for expenses resulting from the fire, such as accommodation or clothes.
- Get supplies of medicine or eye glasses.

## Have you considered installing sprinklers?

Home sprinklers will protect your family, home, and contents from the threat of fire - 24 hours a day.

Sprinkler technology has come a long way in a short space of time. The cost of including home sprinklers into a new house or adding them as part of major renovations is probably a lot cheaper than you think.

Home sprinklers use the same domestic plumbing as your kitchen taps and can be installed by a qualified plumber in less than two days.

More importantly though, sprinklers provide the fastest possible means of extinguishing fires in rural homes.

For more information, visit [www.fireandemergency.nz](http://www.fireandemergency.nz)

## Fire seasons

**Open fire season** - a fire permit is not required to light a fire in the open air.

**Restricted fire season** - in this season a fire permit from Fire and Emergency is required before you can light a fire in the open air.

**Prohibited fire season** - this means a total fire ban is in place. Lighting fires in the open air is not permitted.

For the current fire season and to apply for fire permits, contact Fire and Emergency NZ on 09 486 7948 or visit [checkitsalright.co.nz](http://checkitsalright.co.nz)

## MAJOR STORMS

### BEFORE A STORM

- Develop a Household Emergency Plan. Assemble and maintain your Emergency Survival Items for your home as well as a portable getaway kit.
- Prepare your property for high winds. Secure large heavy objects or remove any item which can become a deadly or damaging missile. Get your roof checked regularly to make sure it is secure. List items that may need to be secured or moved indoors when strong winds are forecast.
- Keep materials at hand for repairing windows, such as tarpaulins, boards and duct tape.
- If you are renovating or building, make sure all work complies with the New Zealand building code which has specific standards to minimise storm damage.
- If farming, know which paddocks are safe to move livestock away from floodwaters, landslides and power lines.

### WHEN A WARNING IS ISSUED AND DURING A STORM

*How a storm surge affects the land.*

- Stay informed on weather updates. Listen to your local radio stations as civil defence authorities will be broadcasting the most appropriate advice for your community and situation.
- Put your household emergency plan into action and check your getaway kit in case you have to leave in a hurry.
- Secure, or move indoors, all items that could get blown about and cause harm in strong winds.
- Close windows, external and internal doors. Pull curtains and drapes over unprotected glass areas to prevent injury from shattered or flying glass.
- If the wind becomes destructive, stay away from doors and windows and shelter further inside the house.
- Water supplies can be affected so it is a good idea to store drinking water in containers and fill bathtubs and sinks with water.
- Don't walk around outside and avoid driving unless absolutely necessary.
- Power cuts are possible in severe weather. Unplug small appliances which may be affected by electrical power surges. If power is lost unplug major appliances to reduce the power surge and possible damage when power is restored.
- Bring pets inside. Move stock to shelter. If you have to evacuate, take your pets with you.

## AFTER A STORM

- Listen to your local radio stations as emergency management officials will be broadcasting the most appropriate advice for your community and situation (see page 6).
- Check for injuries and help others if you can, especially people who require special assistance.
- Look for and report broken utility lines to the appropriate authorities - power, teleco's.
- Contact your local council if your house or building has been severely damaged.
- If your property or contents are damaged, take notes and photographs and contact your insurance company.
- Inform your landlord if there is damage to the rental property.
- Ask your council for advice on how to clean up debris safely.

### LANDSLIDES Warning signs

- Small slips, rock falls and subsidence at the bottom of slopes.
- Sticking doors and window frames.
- Gaps where frames are not fitting properly.
- Outside fixtures such as steps, decks, and verandahs moving or tilting away from the rest of the house.
- New cracks or bulges on the ground, road, footpath, retaining walls and other hard surfaces.
- Tilting trees, retaining walls or fences.

## TORNADOES

Tornadoes sometimes occur during thunderstorms in some parts of New Zealand. A tornado is a narrow, violently rotating column of air extending downwards to the ground from the base of a thunderstorm. Warning signs include a long, continuous roar or rumbles or a fast-approaching cloud of debris which can sometimes be funnel shaped.

Alert others if you can and take shelter immediately.

A basement offers the greatest safety. If underground shelter is not available, move to an interior room without windows on the lowest floor. Get under sturdy furniture and cover yourself with a mattress or blanket.

If caught outside, get away from trees if you can. Lie down flat in a nearby gully, ditch or low spot and protect your head.

If you're in a car, get out immediately and look for a safe place to shelter. Do not try to outrun a tornado or get under a vehicle for shelter.

## DURING A PROLONGED POWER OUTAGE

- Be aware that landlines and cellphones may fail after about ten hours (the expected service life of backup batteries in the phone exchanges and the cellphone towers).
- Cordless phones will fail as soon as the power goes off. Always have a corded phone handy to connect to the landline wall socket if there is a power failure.
- Telephone answering machines may not work when the power is off.
- Use phones for urgent matters only - it drains the batteries in the phone exchanges and they may fail earlier.
- Use perishable food from the fridge first. Then use food from the freezer. Finally begin to use non-perishable foods.
- If you need power for medical needs or equipment, you should contact your provider before an outage occurs so you have a plan and know what to do.

## Floods

### BEFORE A FLOOD

- Find out from your local council if your home or business is at risk from flooding. Ask about evacuation plans and local public alerting systems; how you can reduce the risk of future flooding to your home or business; and what to do with your pets and livestock if you have to evacuate.
- Know where the closest high ground is and how to get there.
- Develop a Household Emergency Plan. Assemble and maintain your **Emergency Survival Items** for your home as well as a portable getaway kit. See page 5 for details.
- Check your insurance policy to ensure you have sufficient cover.

### DURING A FLOOD OR IF A FLOOD IS IMMINENT

Listen to your local radio stations as emergency management officials will be broadcasting the most appropriate advice for your community and situation.

If you have a disability or need support, make contact with your support network.

Put your household emergency plan into action and check your getaway kit. Be prepared to evacuate quickly if it becomes necessary.

Where possible, move pets inside or to a safe place, and move stock to higher ground.

Consider using sandbags to keep water away from your home.

Lift valuable household items and chemicals as high above the floor as possible.

Fill bathtubs, sinks and storage containers with clean water in case water becomes contaminated.

Turn off utilities if told to do so by authorities as it can help prevent damage to your home or community. Unplug small appliances to avoid damage from power surges.

Do not attempt to drive or walk through floodwaters unless it is absolutely essential.

### AFTER A FLOOD

- It may not be safe to return home even when the floodwaters have receded. Continue to listen to your local radio station for civil defence instructions.
- Help others if you can, especially people who may require special assistance.
- Throw away food including canned goods and water that has been contaminated by floodwater.
- Avoid drinking or preparing food with tap water until you are certain it is not contaminated. If in doubt, check with your local council or public health authority.
- Look for and report broken utility lines to appropriate authorities.

If your property is damaged, take notes and photographs for insurance purposes. If you rent your property, contact your landlord and your contents insurance company as soon as possible.

## Possible Flood Impacts

# get thru...

## Road Transport Crashes

### BEFORE

Heavy vehicles pose a particular challenge to road safety because the consequences of their crashes are more severe, particularly if they are transporting flammable or toxic substances. Toxic or industrial chemicals are widely used, stored and transported for industrial use throughout the Kaipara area. These chemicals have the potential to cause mass casualties and would require large scale evacuation of buildings and residents.

### AFTER

Decontamination is the process of cleansing the human body to remove contamination by hazardous materials and infectious substances. People who have been contaminated are usually separated by sex and led into a decontamination tent where they privately shed their contaminated clothes and are then showered and issued clean clothing or plastic overalls. Fire Service, St John and Health personnel will then provide medical attention if required. Civil Defence, Red Cross, Salvation Army and Government support agency personnel will then provide temporary shelter, assistance and support at civil defence centres.

### DURING

#### Definition of Evacuation Zones:

#### Hot Zone

This is the contaminated area where the initial release occurs or disperses to. It will be the area likely to pose an immediate threat to the health and safety of all those located within it and is the area of greatest risk. The need to remove persons from this area is paramount. The Incident Commander will carry out a Dynamic Risk Assessment prior to anyone entering it and is an area that must be strictly controlled.

#### Warm Zone

This is the area uncontaminated by the initial release of a substance, which becomes contaminated by the movement of people or vehicles. It is imperative that no victims leave this zone/cordon without appropriate decontamination.

#### Cold Zone

This is the uncontaminated area where no exposure or risk is expected. Decontaminated persons will be taken to this area and given medical advice, medication and assessment by medical staff.

## TSUNAMI

### BEFORE A TSUNAMI

Getting ready before a tsunami strikes will help reduce damage to your home and business and help you survive.

- If you live in a coastal area, ask your council about your tsunami risk and local warning arrangements.
- If you have a disability or special requirements, arrange with your support network to alert you of any warnings and emergency broadcasts.
- Develop a Household Emergency Plan (p.5) and have a Getaway Kit (p.6) ready.
- Know where the nearest high ground is and how you will reach it. Plan to get as high up or as far inland as you can. Plan your escape route for when you are at home, as well as for when you may be working or holidaying near the coast.

### AFTER A TSUNAMI

- Continue to listen to the radio for civil defence advice and do not return to the evacuation zones until authorities have given the all-clear.
- Be aware that there may be more than one wave and it may not be safe for up to 24 hours, or longer. The waves that follow the first one may also be bigger.
- Check yourself for injuries and get first aid if needed. Help others if you can.
- Do not go sightseeing.
- When re-entering homes or buildings, use extreme caution as floodwaters may have damaged buildings. Look for, and report, broken utility lines to appropriate authorities.
- If your property is damaged, take notes and photographs for insurance purposes. If you rent your property, contact your landlord and your contents insurance company as soon as possible.

### DURING A TSUNAMI

- Take your getaway kit with you if possible. Do not travel into the areas at risk to get your kit or belongings.
- Take your pets with you if you can do so safely.
- Move immediately to the nearest higher ground, or as far inland as you can. If evacuation maps are present, follow the routes shown.
- Walk or bike if possible and drive only if essential. If driving, keep going once you are well outside the evacuation zone to allow room for others behind you.
- If you cannot escape the tsunami, go to an upper storey of a sturdy building or climb onto a roof or up a tree, or grab a floating object and hang on until help arrives.
- Boats are usually safer in water deeper than 20 metres than if they are on the shore. Move boats out to sea only if there is time and it is safe to do so.
- Never go to the shore to watch for a tsunami. Stay away from at-risk areas until the official all-clear is given.
- Listen to your local radio stations as emergency management officials will be broadcasting the most appropriate advice for your community and situation.

## Warning systems

### Tsunami warnings

Warning messages and signals about a possible tsunami can come from several sources – natural, official or unofficial.

#### Natural warnings

For a local source tsunami which could arrive in minutes, there won't be time for an official warning. It is important to recognise the natural warning signs (see page 3) and act quickly.

#### Official warnings

Official warnings are only possible for distant and regional source tsunami. Official warnings are disseminated by the National Emergency Management Agency (NEMA) to the national media, local authorities and other key response agencies. Your local council may also issue warnings through local media and other local arrangements.

#### Unofficial or informal warnings

You may receive warnings from friends, other members of the public, international media and from the internet. Verify the warning only if you can do so quickly. If official warnings are available, trust their message over informal warnings.

### Telephone tree

A phone tree is a network of people organized in such a way that they can quickly and easily spread information amongst each other. Telephone Trees can be used to inform the community in the event of a Civil Defence emergency response and be based on a street, neighbourhood, social group, family or whanau structure.

## For further information

Turn on a radio, television or computer and search for information on council websites and social media sites (Facebook and Twitter). You can also go straight to Civil Defence Northland Facebook page [www.facebook.com/civildefencenorthland](https://www.facebook.com/civildefencenorthland) or also [www.nrc.govt.nz/civildefence](http://www.nrc.govt.nz/civildefence)

If you don't have access to any of these, contact someone you think may have.

Follow instructions given by the media and spread the word to people you think may be at risk.

## Evacuation methods

Civil Defence warnings to this area will be by the following methods.

- Warnings via radio
- Warnings via Emergency Mobile Alert (EMA)
- Local procedures. e.g. phone trees

## What zone are you in?

Northland residents and visitors have access to more than 20 maps showing Tsunami Evacuation Zones for many of the regions coastal communities.

Northland Civil Defence have maps that graphically highlight three zones that need to be evacuated in the event of a tsunami warning, depending on different levels of risk.

The maps allow people to identify where their property or house sits in regard to the evacuation zone, an escape route and where they should go.

It's important for people to plan a route than can be a quick exit and preferably one that's on foot so roads aren't clogged up.

In some cases this might not be practical due to distances required to travel, so it is important to identify optional routes and aim to keep going as far as possible so others who may be behind aren't blocked in.

The evacuation zones are based on different level of inundation - i.e. how far the water is likely to reach onshore in different scales of tsunami - with a red zone nearest the beach, moving through orange and yellow evacuation zones further inland.

## Tsunami wave zone definitions

<b>RED ZONE</b>	Higher Probability	20cm - 1 metre
<b>ORANGE ZONE</b>	Moderate Probability	1 metre - 5 metres
<b>YELLOW ZONE</b>	Lower Probability	5 metres - 8 metres

### The red zone

is simply the topographic map coastline and is to be usually evacuated in response to the 0.2-1m wave height threat level called 'threat to beach, harbours, estuaries and small boats'.

### The orange zone

matches the 1-5m wave height threat level called a 'moderate land threat', arriving on or below high tide. In other words if a moderate land threat level (or a lesser threat level) is called, only the red and orange zones need to be evacuated - even if the wave could arrive on high tide. The orange zone includes the red zone.

### The yellow zone

includes the maximum credible tsunami sources taking into account the worst cases from both modelling and geological deposits. In an official warning larger than the moderate land threat level, or in the case of a natural or informal warning where the potential wave height is unknown, all zones including the yellow zone should be (self)-evacuated. The yellow zone includes the red and orange zones.

For all maps visit  
[www.nrc.govt.nz/civildefence/tsunami-evacuation-zones/](http://www.nrc.govt.nz/civildefence/tsunami-evacuation-zones/)

## Possible Tsunami Impacts

## Plan activation process

These instructions are for members of the Ngati Taka me Hapori O Ngunguru/Tutukaka community response group and emergency services for initiating their pre-planned roles.

### DO THIS

- Contact members of the response group and decide on an appropriate place to meet
- Liaise to determine what actions should be taken
- Consider who will be affected and where
- Activate community warning systems i.e. phone tree, social media
- Consider the location of a control point / centre
- Consider the establishment of Civil Defence Community-Led Centres
- Notify Civil Defence of what actions have been taken

## Civil Defence Community Led Centres

The opening of these centres will vary depending on the type of Civil Defence emergency.

### Ngunguru Marae

60 Waiotoi Road, Ngunguru 0173

### Ngunguru Sport & Recreation Centre

Kopipi Crescent, Ngunguru 0173

# get thru...

## Civil Defence Community-Led Centres ★

## Roles and responsibilities

The role and responsibilities of the emergency services is clearly defined by legislation. In the event of this plan being activated due to an emergency event occurring, the roles and responsibilities of community groups are set out as below.

### POLICE

Maintain law and order

Protect life and property

Assisting the coroner

Coordinating movement control

Search and rescue

### FIRE SERVICE

Fire-fighting responsibilities
