Daily Checklist																																
Month:	ay	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31
At the Dairy:																																
Stormwater diversion = effluent mode if yard is dirty. Is in stormwater bypass mode if yard is clean and rain is likely																																
All hoses are completely turned off - no leaks																																
Properly dispose of any rubbish that may enter the effluen system	t																															
If conditions are not suitable for irrigation, effluent is reticulated to the ponds.																																
When applying effluent to land:																																
Assess whether the soil is dry enough for irrigation - if uns	ure																															
If it is too wet to irrigate, make sure the pond mainline is of and irrigation mainline shut at the sump, prior starting pure																																
Layout the irrigator(s) correctly to prevent effluent entering drain																																
Check paddocks and drains during and after irrigation for effluent runoff.																																

Weekly Checklist				
Month:	Week 1	Week 2	Week 3	Week 4
Walk around the pond(s) and visually check effluent levels, pipes and embankments for leaks.				
Check the mainline and laterals for leaks.				
Check the pump is in good working condition.				
Report any damages or breakdowns.				

Monthly Checklist												
Year:	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec
Spray weeds around sludge bed, dairy shed and yard.												
Spray weeds around effluent pond.												
Livestock to be grazed "lightly" around effluent pond.												
Grease the main sump pump
