Help protect kauri trees

You can help by

- ✓ Cleaning your boots and equipment before entering kauri forests
- ✓ Always use cleaning stations
- ✓ Stay on the tracks and follow signage instructions
- ✓ Do not enter closed tracks
- ✓ Keep animals away from kauri
- ✓ Keep off kauri tree roots
- ✓ Carry a hygiene kit for off track activities

Hygiene kit contents

- > Spare bag for footwear
- > Hard bristle scrubbing brush
- > Spray bottle with disinfectant
- > Pressure pump spray bottle with water to remove large amounts of dirt

Report sick looking kauri trees to Northland Regional Council

protectkauri@nrc.govt.nz

What do PA (Phytophthora Agathidicida) Infected Kauri Look Like?

Infected trees show a range of symptoms including yellowing of foliage, loss of leaves, canopy thinning, branch dieback and orange/yellow coloured gum from lesions around the base of the tree. These symptoms increase as the tree progresses towards death.

Canopy loss, thinning, branch dieback and tree death

Change in colour of foliage to yellow or red-brown

Bleeds which start from the base and move up the tree

SCRUB

Your gear to remove dirt

Use a hard bristle brush to effectively remove dirt from boots and gear

CHECK

Your gear is dirt free

Thoroughly check over all gear that has been in contact with soil. Be sure to check in small crevices like boot tread

SPRAY

Your gear with disinfectant

Use a spray bottle with 70% Methylated spirits and 30% water to disinfect gear
