Art for Earth’s Sake

Making sustainable artworks from the environment enthralled more than 180 students, teachers, family and community members at this year’s Enviroschools’ Expos.

Exciting hands-on learning experiences were offered at the two annual expos for primary and intermediate students - this year themed ‘Art for Earth’s Sake’ and held in Whangārei and Kerikeri.

Each expo featured a variety of ‘art stations’ designed to show how natural materials and processes can be used creatively to make all sorts of art.

Participants were able to make links between the arts, science, technology and nature innovation, especially in areas like cyanotype photography where pieces of plants or shells can be transformed into photographic works of art.

“They created photos I’d happily hang on my walls,” says Cr Joce Yeoman, who opened the Kerikeri event.
